

Lab 5: Retrieving Data from the Database

Scenario:

The store wants to display product details on the dashboard.

Objective:

Use Find, FirstOrDefault, and ToListAsync to retrieve data.

Source code

```
using Microsoft.EntityFrameworkCore;
using EFCoreStore.Data;
using var context = new AppDbContext();
var products = await context.Products.ToListAsync();
Console.WriteLine("All Products:");
foreach (var p in products)
{
    Console.WriteLine($"{p.Name} - ₹{p.Price}");
}
var product = await context.Products.FindAsync(1);
Console.WriteLine($"Found: {product?.Name}");
var expensive = await context.Products
    .FirstOrDefaultAsync(p => p.Price > 50000);
Console.WriteLine($"Expensive: {expensive?.Name}");
```

Output

```
All Products:
Laptop - ₹75000
Rice Bag - ₹1200

Found: Laptop
Expensive: Laptop
```

SQL

SELECT * FROM Categories;

CategoryId	Name
1	Electronics
2	Groceries

SELECT * FROM Products;

ProductId	Name	Price	CategoryId
1	Laptop	75000	1
2	Rice Bag	1200	2
