

Web Api using .Net core with Swagger

Startup.cs

```
using Microsoft.AspNetCore.Builder;
using Microsoft.AspNetCore.Hosting;
using Microsoft.Extensions.Configuration;
using Microsoft.Extensions.DependencyInjection;
using Microsoft.Extensions.Hosting;
using Microsoft.OpenApi.Models;
using System;

namespace FirstWebApi
{
    public class Startup
    {
        public Startup(IConfiguration configuration)
        {
            Configuration = configuration;
        }

        public IConfiguration Configuration { get; }

        public void ConfigureServices(IServiceCollection services)
        {
            services.AddControllers();
            services.AddSwaggerGen(c =>
            {
                c.SwaggerDoc("v1", new OpenApiInfo
                {
                    Title = "Swagger Demo",
                    Version = "v1",
                    Description = "TBD",
                }
            });
        }
    }
}
```

```

        TermsOfService = new Uri("https://example.com/terms"),
        Contact = new OpenApiContact
        {
            Name = "John Doe",
            Email = "john@xyzmail.com",
            Url = new Uri("https://www.example.com")
        },
        License = new OpenApiLicense
        {
            Name = "License Terms",
            Url = new Uri("https://www.example.com")
        }
    });
});
}

public void Configure(IApplicationBuilder app, IWebHostEnvironment env)
{
    if (env.IsDevelopment())
    {
        app.UseDeveloperExceptionPage();
    }
    app.UseSwagger();
    app.UseSwaggerUI(c =>
    {
        c.SwaggerEndpoint("/swagger/v1/swagger.json", "Swagger Demo");
    });

    app.UseRouting();
    app.UseAuthorization();
    app.UseEndpoints(endpoints =>
    {
        endpoints.MapControllers();
    });
}

```

```
        });  
    }  
}  
}
```

EmployeeController.cs

```
using Microsoft.AspNetCore.Mvc;  
using System.Collections.Generic;  
namespace FirstWebApi.Controllers  
{  
    [Route("api/Emp")]  
    [ApiController]  
    public class EmployeeController : ControllerBase  
    {  
        [HttpGet]  
        public IActionResult GetEmployees() {  
            var employees = new List<object> {  
                new { Id = 101, Name = "Alice Smith", Department = "IT" },  
                new { Id = 102, Name = "Bob Jones", Department = "HR" },  
                new { Id = 103, Name = "Charlie Brown", Department = "Finance" }  
            };  
            return Ok(employees); }  
    }
```

Output

```
[
  {
    "id": 101,
    "name": "Alice Smith",
    "department": "IT"
  },
  {
    "id": 102,
    "name": "Bob Jones",
    "department": "HR"
  },
  {
    "id": 103,
    "name": "Charlie Brown",
    "department": "Finance"
  }
]
```
